Architectural Clouds
Installation Instructions

Assemble the frame by matching end A to A, B to B etc. and securing each connection with the Push-Button Connection as shown in **Figure 1.** If included, attach Spreader to designated points (1 to 1, 2 to 2 etc.) and secure with (2) hex head bolts.

Push the (3) hex head bolts into their designated holes as shown in **Figure 2.**

Fit the fabric cover onto the frame like a pillow case. Find the "Zipper Starts Here →" markings on the tube to orient the zipper in the correct position and push the hex head screws through the holes in the fabric as the cover is zipped as shown in **Figure 3.**

Thread the hanging assembly onto the screws protruding through the fabric as shown in **Figure 3.**

Loop the top cable around the hanging fixture (**Figure 4**) and adjust the cables to the desired length. Cut any excess cable and your cloud is now complete!
