

Cleaning:

Remove surface dirt and soiling conditions, using a soft clean sponge and lukewarm water. Rinse with clear, clean water. If conditions persist, use a mild liquid detergent and rinse with clean water. After washing and rinsing, be sure to dry the surface by blotting with a damp cloth or chamois to prevent streaking and water spots. You may also dust the surface with a soft, damp cloth or chamois and wipe the surface gently. Avoid hard rubbing and never use any abrasive cleaners, as this may damage the material.

Disinfectant Use:

A clean surface is more important now than ever. Substrates that can be repeatedly cleaned to combat ongoing exposure to pathogens is critical. A stringent program of cleaning and disinfecting has been proven to reduce the incidence of infectious diseases. In laboratory testing using the ASTM D3450 test method, our Door Skins were shown to have no discoloration or damage to the finish when repeatedly cleaned and disinfected with the following cleaners and disinfectants listed on the following pages.

The EPA published a list of disinfectants that meet its criteria for use against SARS-CoV-2, the novel Coronavirus that causes COVID-19. OMNOVA\* has tested disinfectants that are approved for use against SARS-CoV-2 on its Door Skin. Those approved for use against SARS-CoV-2 are in blue, bolded font.
